An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998).cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and SalI. This clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index _e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Large scale analysis of Arabidopsis full-length cDNA Unpublished (2002)

An Arabidopsis full-length cDNA library was constructed essentially

An Arabidopsis full-length cDNA library was constructed essentially

An Arabidopsis full-length cDNA library was constructed with BamHI

as reported previously (Seki et al., 1998).cDNA cleaved with BamHI

and XhoI was ligated to modified the modified FLC-1 vector (Carninci et

al., submitted for publication) digested with BamHI and Sall. This

clone is in a modified pBluescript vector. Please visit our web

gite (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 (bases 1 to 421)

/note="Vector: pSPORT; Site_1: NotI; Site_2: SalI; cDNA
library was derived from unitreated rosette tissue from
Arabidopsis thaliana, Columbia Col-0, at 4 - 7 weeks.
Plants were grown in 1:1: peat moss/vermiculite/perlite
soil at 22 deg. C +/- 3 deg. C under constant light, and
watered with fertilizer. cDNA synthesis was initiated
using a NotI-oligo(dT) primer. Double-stranded cDNA was
blunted, ligated to SalI adaptors, digested with NotI,
size-selected, and cloned into the NotI and SalI sites of
the pSPORT vector."

Claim 8; Fig 1; 36pp; French.

The gresent sequence represents an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, patticularly L-lysine. The present sequence is a protein described in the particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nakagawa

                                                                                                                                    밁
                                                                                                                                                                                                                                                                             AAF71138 to AAF71357 encode the Corynebacterium glutamicum homeostasis and adaptation (HA) proteins given in AAB79023 to AAB79242. The C. glutamicum Ha genes (I) can be used in vectors for expression in host cells and production of fine chemicals, such as, an organic acid, proteins genic or nonproteinogenic amino acid (preferred), purine or pyrimidine base, nucleoside, nucleoside, lipid, saturated or unsaturated fatty acid, diol, carbohydrate, aromatic compound, vitamin, cofactor, polyketide or enzyme. The amino acids produced can be lysine, glutamine, cofactor, polyketide or enzyme. The amino acids produced can be lysine, glutamine, cysteine, valine, leucine, isoleucine, serine, threonine, methionine, cysteine, bhenylalanine, or tryptophan. The fine chemical production can be modulated. The presence or tryptophan. The fine chemical production can be modulated. The presence or activity of Corynebacterium diphtheriae.

(I) can be used to map the C. glutamicum genome or can be used as markers for genetically engineered Corynebacterium or Brevibacterium. The HA proteins encoded by the (I) are used to maintain homeostasis in C. conditions or help the microorganism to adapt to different environmental
                                                                                                                                                                                        Matches
                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes proteins and their fragments (I) encoded CC hy chromosome 2 of the human malarial parasite, Plasmodium falciparum. CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and (II) are useful for the development of vaccines against P. falciparum (I) are useful for the development of vaccines against P. falciparum (II) and (II) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they care rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum infection, or they can be used to identify drug resistance in P. falciparum infection of proteins (II) parasite biology, a process hampered by the complexity of the parasitic lifecycle, and (II) a process hampered by the complexity of the parasitic lifecycle, and (II) a process and mosquito resistance to insecticides have led to a resurgence (II) and there is an pressing need for vaccines and new drugs. the invention relates to an isolated multiplication where expression of the mucleic acid inhibits proliferation of a cell. Also included are: confirmed the nucleic acid inhibits proliferation of a cell. Also included are: confirmed to expression is inhibited by the antisense concluded; (2) a host cell containing the vector; (3) an isolated content comprising a promoter operably linked to the nucleic acid content whose expression is inhibited by the antisense content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content content

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 24-APR-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO2003033680-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens.
                                                                                  The invention relates to a novel isolated polypeptide which is a huma kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides, agonists and antagonists are useful for diagnosing, treating or agonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, preventing cell proliferative disorders such as therosclerosis, and cancer, developmental disorders e.g. mental cirrhosis, hepatitis and cisorders including Alzheimer's disease and retardation, neurological disorders including Alzheimer's disease and Parkinson's disease, autoimmune and inflammatory disorders such as Parkinson's disease and diabetes mellitus and finally, viral, bacterial, frungal, parasitic, protozon or helminthic infections. Furthermore, to polynucleotides encoding KPP may be useful for creating transgenic procedures. The current sequence is that of the human KPP protein of incortions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gururajān R, Hafalia AJA, Khan FA Lindquist EA, Lu DAM, Lu Y, Marz Ramkumar J, Recipon SA, Richardso Thornton MB, Tran UK, Chawla NK, Zebarjadian Y;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis, cancer or hepatitis.

The polypeptide and the polynucleotide are used for treating various diseases, such as prostatic cancer, prostatic benign tumour, other tumours, folic acid metabolism fault, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and inflammations. This sequence represents a human prostatic specific membrane antibody protein 11.88 Netreminal peptide, used in EDISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; g protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporrosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 5;
The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-MAR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABP82841 standard; peptide; 18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc avidity for a particular GPCR. (I) can be used as GPCR modulators and in cc gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific cc antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for CC GPCRs and antibodies are useful for diagnosing and designing drugs for creating immune-related diseases, growth-related diseases, cell cc regeneration-related disease, immunological-related disease, cell cc diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, cell costeoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host cc disease, parkinson's disease, multiple sclerosis, pain, psoriasis, cancer disease, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, cc loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, cc any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8

CC and its corresponding polymucleotides. HCITEDX proteins are useful for
CC identifying compounds which modulate the cytroplasmic sequestration of the
CC identifying compounds which modulate the cytroplasmic sequestration of the
CC in the activation of genes involved in cholesterol uptake, cholesterol
CC biosynthesis and in the control of inflammation. They are therapeutically
CC useful in number of different indications, particularly reduction of
CC cholesterol biosynthesis and inflammation, prevention of tumour
CC angiogenesis and treatment of any other condition. HCITEDX proteins are
CC useful in screening methods for identification of compounds which
CC interfere with the function of HCITEDX and useful for modulating hypoxia
CC signalling, tumour angiogenesis or cholesterol synthesis. HCITEDX
CC modulators are useful for preventing tumour angiogenesis and treating
CC ischaemic heart disease. Compounds which promote the translocation of
CC cytoplasmic HCITEDX in breast cancer cells are useful as leads in the
CC development of anti-breast cancer rells are useful as leads in the
CC development of anti-breast cancer rells are useful as leads in the
CC modulators are useful for treating Netherton's disease or atopic disease.
CC modulators are useful for treating Netherton's disease or atopic disease.
CC modulators are useful for used in gene therapy. The present peptide
CC sequence is the p300-CH1 interacting domain of p35srj/CITED2. This
CC sequence is used to clone full length HCITEDX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The present sequence is conserved protein region of a Caenorhabditis elegans homologue of a key metabolic enzyme. A number of C. elegans genes have been identified as homologues of genes in the mammalian insulin signalling pathway. The C. elegans age-1 gene encodes a homologue of the mammalian PI 3-kinase whilst daf-2 encodes a homologue of the mammalian insulin receptor. The C. elegans AKT kinase and PKB kinase act downstream of daf-2 and age-1, just as their mammalian homologues act downstream of insulin signalling. The C. elegans PTEN lipid phosphatase homologue, DAF-18, has been found to act upstream of AKT in the pathway. This discovery has enabled mammalian PTEN action to be mapped to the insulin signalling pathway. Conserved DAF motifs can be used to design probes to identify mammalian DAF homologues and thus to identify individuals with a predisposition toward the development of glucose intolerance conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the encoded proteins (AAOO0010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Caenorhabditis elegans; metabolic enzyme; AKT kinase; daf-18; insulin signalling pathway; daf-2; age-1; insulin receptor; PI 3-kinase; PKB kinase; PTEN lipid phosphatase; antidiabetic; anorectic; obesity;
